

PROJECT 1 - Student Voting System

Mark Reyes Cabalona
Eyvind Zach Balasta

BSCS 2A
BSCS 2A

The project folder contains 2 subfolders called db and src, the db folder contains the db files(we used csv files for db), and the src folder contains all the source codes for the project. This structure makes our development much easier.

*******IMPORTANT*******

Change the 'FLASHDRIVE_PATH' inside the 'listProvider.cpp' file to test the flashdrive checking feature of the program

The default 'FLASHDRIVE_PATH' uses the db folder so that development and testing won't have to use an actual flash drive.

**** project_folder/src/providers/listProviders.cpp ****

To **run the program**, just run the **build_and_run.bat** file inside the **src** folder. It is a batch script that runs the commands to compile and run the program.
